DETAILED ACTION

Claims 1 – 31 have been presented for examination. Claim 8 has been cancelled; Claims 1, 26, 27 and 28 have been amended in an amendment filed 4/6/2006 and Claim 2, 17, 18, 19 and 31 have been further amended in an Examiner Amendment filed 6/13/2006.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission with an IDS filed on 9/11/2006 has been entered.

The most updated claims of this application have been presented in the Examiner Amendment filed 6/13/2006. Please refer the claims on the record for allowance accordingly.

Allowable Subject Matter

1. Claims 1 – 7 and 9 – 31 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The above mentioned claims are allowable over prior arts because the CPA (Cited Prior Art) of record fails to teach or render obvious the claimed limitations in combination with the specific added limitations, as recited in independent claim 26, 27 and 28 and subsequent dependent claims.

The prior arts Rhoads, alone or in combination with Koopman, fail to teach or suggest a method based on an algorithm capable of being graphically implemented to be used for the generation or filtering of data sequences and cryptographic applications by choosing a cell as the pole, and plot a set of lines from the pole of that cell, and repeat the process, up to a given number of cells which define the second contour, covering all or part of that contour until the first area has been fully swept; perform an operation on the contents of each of the cells used when plotting each of the lines of the set and included in that first contour, thereby transforming their state each time the cell in question is found in one of the lines of the set; and the second contour is unregularized and the cells of the same are obtained by means of a Pseudo-Noise Sequence Generator (PNSG), so that the distance from the cells within that second contour to their corresponding pole is dependent on the output of the Pseudo-Noise Sequence Generator.
